

## About Future Wonder

Future Wonder is a digital design and development agency specializing in AI-assisted software development, Vibe code rescue, architecture, testing, infrastructure, staff augmentation, and vendor management. We work with experienced technical teams as well as founders who need hands-on IT coaching. Our prototyping process is now built around close collaboration with non-technical Vibe coders and no-code creators. Our clients include fintech companies, cutting-edge Indiana software startups, and other established businesses.

## Job description

Our 2026 AI Charioteer internship is open for applications through mid-May. You will work with our design and development teams on internal projects and client engagements during Summer 2026.

1. You will act as a “Charioteer”, driving and coordinating a variety of generative AI tools and integrated approaches to achieve your goals, recording both failures and successes.
2. At the end of your internship, you will prepare an evidence-based presentation: As IT consultants, how should we pursue our business using our adopted AI toolsets and keep pace with changing AI technology? What controls should we have, and what should we be wary of?

This is an exciting opportunity to continue our experimentation with AI technologies, create and learn new technical skills and approaches, and participate in the next evolution of computer science. The work will be paid at an hourly rate of \$17.

## Education

- Our internship candidates should be studying for an Associate’s or Bachelor’s degree in computer science, or a related field.
- We will also consider graduates from an accredited tech program with good references.

## Requirements

- Authorization to work in the U.S.; this includes OPT / CPT programs
- At least 2 solid academic or work references
- Willingness to work on a qualifying online coding or generative AI exercise, including communication and follow-ups
- Experience developing web-based applications with HTML, CSS & JavaScript
- Ability to objectively report on failures as well as successes
- A fun-loving attitude when it comes to learning, development and teamwork!

## Desirable to have

- Experience interacting with generative AI personally and professionally

- An interest and understanding of LLM AI models and their current limitations
- Comfort with diving into cloud-based development APIs and toolsets
- ReactJS experience, or another similar framework like Angular or Vue
- Experience working with and building backend API endpoints, ideally in Python or Node
- Knowledge of version control (e.g. GitHub, BitBucket)

## Location

We are located in Bloomington, Indiana at The Dimension Mill, part of [Amplify Bloomington](#). We offer a fully remote working environment for candidates with excellent communication skills and a solid work ethic.

## To Apply

Please apply with a cover letter, resume and unofficial transcript to [jobs@futurewonder.com](mailto:jobs@futurewonder.com). Why is working at Future Wonder a great fit for you, and why should we be interested in hiring you? Include the information below in your cover letter:

- A short bio / introduction
- Your background in web development and computer-related technologies
- Your opinions of and experience with the current generation of LLMs and ML tools
- Why this internship interests you

We encourage all IU Students to apply via our posting in [Handshake](#).

Purdue students are encouraged to apply via our posting in [MyCCO](#).
